
Disease/domain specific knowledge portal
Central DBs
Safe core info, summaries, open and comprehensive for a topic, unification and archiving roles
'Integration' DBs
Disease or geographic focus, summaries and patient level data, consortia, external data federation
Source DBs
Specialised content with expert curation, sensitive patient level data, controlled access
Drug and treatment info
Disease domain knowledge-base
Single gene mutation databases
Multi-omics data and profiles
Integration interoperability and analytics
Biobanking and registry data
Deep clinical phenotypes
Biology pathways
Animal model data
